The present Expedition to Guatemala by which the work recorded in this article was performed consisted of Dr. Joseph C. Bequaert, Assistant Professor of Entomology at the Department of Tropical Medicine of Harvard University, Dr. Miguel Munoz Ochoa, Chief of the Parasitological Division of the Department of Public Health of Guatemala, and Mr. S. Bennett, a Technician of the Department of Tropical Medicine, besides the writer. The entomological side of the work will be fully described by Dr. Bequaert in the complete report, which will also contain the epidemiological data by Dr. Ochoa. Acknowledgements of assistance and courtesy, as well as fuller references to the literature, will likewise be given in the final report.

At the present time we wish to express our indebtedness to Mr. Victor M. Cutter, President of the Company, for his interest and support in these investigations, and to the late Dr. W.E. Deeks, General Manager of the Medical Department and Dr. R.C. Connor, the present General Manager for cooperation in the organisation of the work. In Guatemala we are particularly indebted to Dr. N.P. Macphail, Medical Superintendent at ... for many introductions and much advice regarding the prosecution of the work. We are also much indebted to Mr. . Wilson and Mr. E.J. LaGarde of the United Fruit Company and Mr. C. Myers, Vice President of the International Railways for many courtesies in connection with our investigation in Guatemala. We are likewise very grateful to Mr. D.S. Hodgson for allowing us to prosecute our studies on his coffee plantation at El Pacayal. To Mr. Gordon P. Smith we are very greatly indebted for allowing us to work on his plantations at Moza, for providing us with all practical facilities for the prosecution of our studies. Without his help some of our work could not have been performed. We are also deeply indebted to the officials of the Health Department of Guatemala for many courtesies. Dr. Calderon who has written a most interesting and
